

LEDGER

The Venture Builder for Human Centric Solutions

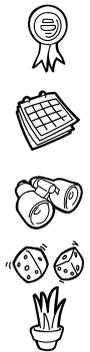

LEDGER, a EU funded project, empowers people to solve problems using decentralised technologies such as blockchain, peer to peer or distributed ledger technologies.

With €5.6 million, LEDGER, a venture builder, provides mentorship, guidance and direct grants to projects willing to build human centric solutions where citizens retain control over their data.

LEDGER will select 32 projects promoting and supporting the creation (MVPs) where privacy by design, openness and data governance are at the core of their proposition.

LEDGER offers to the selected projects:

- ⊗ **Up to €200.000 equity free**
- ⊗ **A venture builder programme for up to 12 months** with business mentors, camps, technological vouchers, training and demo days.
- ⊗ An expert **researcher in residence** along the full programme
- ⊗ Access to players for market validation
- ⊗ Support to **raise further investment**

⊗ LEDGER will focus on 5 sectors plus one open vertical for disruptive projects:

Health 
Finance 
Collaborative Economy 
Public Services 
Energy 
Disruptive projects 

After a first 9 months stage to develop and test an MVP, the 16 best projects will enter a 3 months second business focus phase where business modelling, fundraising and access to market services will be provided.

The project partners of the consortium are:
FundingBox (Poland, Spain and Denmark), Dyne (Holland) and Blumorpho (France).
